## Millbrae Elementary School District 2022 Developer Fee Justification Study *April* 2022

## **Appendices**

- SAB 50-01 Enrollment Certification/Projection
- Proposed Project List: 2018 Facilities Master Plan
- Census Data
- Use of Developer Fees
- Site Development Costs
- Index Adjustment on the Assessment for Development State Allocation Board Meeting of February 23, 2022
- Annual Adjustment to School Facility Program Grants

## **Executive Summary**

This Developer Fee Justification Study demonstrates that the Millbrae Elementary School District requires its share of the full statutory impact fee to accommodate impacts from development activity.

A fee of \$4.08 per square foot for residential construction and a fee of \$0.66 per square foot for commercial/industrial construction is currently assessed on applicable permits pulled in the District. The new fee amounts are \$4.79 per square foot for residential construction and \$0.78\* per square foot for commercial/industrial construction. This proposed increase represents \$0.71 per square foot and \$0.12 per square foot for residential and commercial/industrial construction, respectively. The Districts share of the developer fees is 60%.

The following table shows the impacts of the new fee amounts:

Table 1

Millbrae Elementary School District

Developer Fee Collection Rates

Totals	<u>Previous</u>	<u>New</u>	<u>Change</u>
Residential	\$4.08	\$4.79	\$0.71
Commercial/Ind.	\$0.66	\$0.78	\$0.12
District Share:	60.00%		
Net Impact	<u>Previous</u>	<u>New</u>	<u>Change</u>
Residential	\$2.45	\$2.87	\$0.42
Commercial/Ind.	\$0.40	\$0.47	\$0.07

<sup>\*</sup>except for Rental Self Storage facilities in which a fee of \$0.04 per square foot is justified.

The total projected number of housing units to be built over the next five years is 671. The average square feet per unit is 825. This Study demonstrates a need of \$3.43 per square foot for residential construction.

## Millbrae Elementary School District 2022 Developer Fee Justification Study April 2022

### **Background**

Education Code Education Code Section 17620 allows school districts to assess fees on new residential and commercial construction within their respective boundaries. These fees can be collected without special city or county approval, to fund the construction of new school facilities necessitated by the impact of residential and commercial development activity. In addition, these fees can also be used to fund the reconstruction of school facilities to accommodate students generated from new development projects. Fees are collected immediately prior to the time of the issuance of a building permit by the city or the County.

The impact of new developments result in the need for either additional or modernization of school facilities to house the students generated. Because of the high cost associated with school facility projects and the District's limited budget, outside funding sources are required for school projects. State and local funding sources for the construction and/or reconstruction of school facilities are limited.

The authority sited in Education Code Section 17620 states in part "... the governing board of any school district is authorized to levy a fee, charge, dedication or other form of requirement against any development project for the construction or reconstruction of school facilities." The legislation originally established the maximum fee rates at \$1.50 per square foot for residential construction and \$0.25 per square foot for commercial/industrial construction. Government Code Section 65995 provides for an inflationary increase in the fees every two years based on the changes in the Class B construction index. As a result of these adjustments, the fees authorized by Education Code 17620 are currently **\$4.79** per square foot of residential construction and **\$0.78** per square foot of commercial or industrial construction.

## Millbrae Elementary School District 2022 Developer Fee Justification Study April 2022

### **Purpose and Intent**

Prior to levying developer fees, a district must demonstrate and document that a reasonable relationship exists between the need for new or reconstructed school facilities and residential, commercial and industrial development. The justification for levying fees is required to address three basic links between the need for facilities and new development. These links or nexus are:

<u>Burden Nexus</u>: A district must identify the number of students anticipated to be generated by residential, commercial and industrial development. In addition, the district shall identify the school facility and cost impact of these students.

<u>Cost Nexus</u>: A district must demonstrate that the fees to be collected from residential, commercial and industrial development will not exceed the cost of providing school facilities for the students to be generated from the development.

<u>Benefit Nexus</u>: A district must show that the construction or reconstruction of school facilities to be funded by the collection of developer fees will benefit the students generated by residential, commercial and industrial development.

The purpose of this Study is to document if a reasonable relationship exists between residential, commercial and industrial development and the need for new and/or modernized facilities in the Millbrae Elementary School District.

Following in this Study will be figures indicating the current enrollment and the projected development occurring within the attendance boundaries of the Millbrae Elementary School District. The projected students will then be loaded into existing facilities to the extent of available space. Thereafter, the needed facilities will be determined and an estimated cost will be assigned. The cost of the facilities will then be compared to the area of residential, commercial and industrial development to determine the amount of developer fees justified.

## **Enrollment Projections**

In 2021/2022 the District's total enrollment (CBEDS) was 2,123 students. The enrollment by grade level is shown here in Table 2.

Table 2

Millbrae Elementary School District

CURRENT ENROLLMENT

Grade	2021/22
TK/K	240
1	219
2	213
3	250
4	228
5	253
6	238
TK-6 Total	1,641
7	224
8	258
7-8 Total	482
TK-8 Total	2,123

This data will be the basis for the enrollment impacts which will be presented later after a review of the development projections and the student generation factors.

#### Student Generation Factor

In determining the impact of new development, the District is required to show how many students will be generated from the new developments. In order to ensure that new development is paying only for the impact of those students that are being generated by new homes and businesses, the student generation factor is applied to the number of new housing units to determine development-related impacts.

The student generation factor identifies the number of students per housing unit and provides a link between residential construction projects and projections of enrollment. The State-wide factor used by the Office of Public School Construction is 0.50 for grades TK-8. For the purposes of this Study we will use the local factors to determine the students generated from new housing developments. Comparing the number of housing units in the school district to the number of students in the school district as of the 2020 Census results in a generation rate of 0.2474 which includes all housing types. Table 3 shows the student generation factors that will be used for the various grade groupings for this study.

Table 3

Millbrae Elementary School District
STUDENT GENERATION FACTORS

<u>Grades</u>	Students per Household
TK-6	0.1005
7-8	0.0245
Total	0.125

These yield rates were calculated based on the projected impact of the planned new development projects. A previous analysis done by SchoolWorks had analyzed several developments built near BART stations that were high density projects. These averaged a student yield rate of 0.1250 TK-8 students per housing unit. Although this rate is much lower than the current district yield rate it is the most likely yield from the type of projects being planned over the next 5 years.

### New Residential Development Projections

The Millbrae Elementary School District has experienced an average new residential construction rate of approximately 124 units per year over the past four years. This was determined by reviewing the residential permits pulled and school development impact fees paid to the District. After contacting the City of Millbrae Planning Department within the school district boundaries, it was determined that the residential construction rate over the next five years will average 134.2 units per year. Projecting the average rate forward, we would expect that 671 units of residential housing will be built within the District boundaries over the next five years. We are not including TOD 1, it is approved but not confident permits will be pulled within the next 5 years.

To determine the impact of residential development, a student projection is done. Applying the student generation factor of 0.125 to the projected 671 units of residential housing, we expect that 83 students will be generated from the new residential construction over the next five years. This includes 67 elementary school students and 16 middle school students.

The following table shows the projected impact of new development. The students generated by development will be utilized to determine the facility cost impacts to the school district.

Table 4

Millbrae Elementary School District

FIVE YEAR DEVELOPMENT IMPACT ANALYSIS

<u>Grades</u>	Current Enrollment	Development <u>Projection</u>	Projected Enrollment
TK to 6	1,641	67	1,708
7 to 8	482	16	498
Totals	2,123	83	2,206

## **Existing Facility Capacity**

To determine the need for additional school facilities, the capacity of the existing facilities must be identified and compared to current and anticipated enrollments. The District's existing building capacity will be calculated using the State classroom loading standards shown in Table 6. The following types of "support-spaces" necessary for the conduct of the District's comprehensive educational program, are not included as "teaching stations," commonly known as "classrooms" to the public:

#### Table 5

#### **List of Core and Support Facilities**

Library Resource Specialist
Multipurpose Room Gymnasium
Office Area Lunch Room
Staff Workroom P.E. Facilities

Because the District requires these types of support facilities as part of its existing facility and curriculum standards at its schools, new development's impact must not materially or adversely affect the continuance of these standards. Therefore, new development cannot require that the District house students in these integral support spaces.

#### Classroom Loading Standards

The following maximum classroom loading-factors are used to determine teaching-station "capacity," in accordance with the State legislation and the State School Building Program.

These capacity calculations are also used in preparing and filing the baseline school capacity statement with the Office of Public School Construction.

#### Table 6

### **State Classroom Loading Standards**

TK/Kindergarten	25 Students/Classroom
1 <sup>st</sup> -3 <sup>rd</sup> Grades	25 Students/Classroom
4 <sup>th</sup> -6 <sup>th</sup> Grades	25 Students/Classroom
7 <sup>th</sup> -8 <sup>th</sup> Grades	27 Students/Classroom

#### **Existing Facility Capacity**

The State determines the baseline capacity by either loading all permanent teaching stations plus a maximum number of portables equal to 25% of the number of permanent classrooms or by loading all permanent classrooms and only portables that are owned or have been leased for over 5 years. As allowed by law and required by the State, facility capacities are calculated by identifying the number of teaching stations at each campus. All qualified teaching stations were included in the calculation of the capacities at the time the initial inventory was calculated. To account for activity and changes since the baseline was established in 1998/99, the student grants (which represent the seats added either by new schools or additions to existing schools) for new construction projects funded by OPSC have been added. Using these guidelines the District's current State calculated capacity is shown in Table 7.

Table 7

Millbrae Elementary School District
Summary of Existing Facility Capacity

School Facility	Permanent Classrooms	Portable <u>Classrooms</u>	Chargeable <u>Portables</u>	Total Chargeable <u>Classrooms</u>	State Loading <u>Factor</u>	State Funded <u>Projects</u>	Total State <u>Capacity</u>
Grades TK-6	63	11	11	74	25	0	1,850
Grades 7-8	27	0	0	27	27	0	729
Totals	90	11	11	101		0	2,579

This table shows a basic summary of the form and procedures used by OPSC (Office of Public School Construction) to determine the capacity of a school district. There are a total of 90 permanent classrooms in the District. In addition, there are 11 portable classrooms. OPSC regulations state that if the number of portables exceeds 25% of the permanent classrooms, then the maximum number of portables to be counted in the baseline capacity is 25% of the permanent classrooms. Since the District has fewer portable classrooms than 25% of the permanent classrooms, all 11 portable classrooms are included in the baseline. This results in a total classroom count of 101 and is referred to as the chargeable classrooms.

To determine the total capacity based on State standards, the capacity of the chargeable classrooms are multiplied by the State loading standards. As Table 7 shows, the total State capacity of the District facilities is 2,579 students.

## <u>Unhoused Students by State Housing Standards</u>

This next table compares the facility capacity with the space needed to determine if there is available space for new students from the projected developments. The space needed was determined by reviewing the historic enrollments over the past four years along with the projected enrollment in five years to determine the number of seats needed to house the students within the existing homes. The seats needed were determined individually for each grade grouping. The projected enrollment in this analysis did not include the impact of any new housing units.

Table 8

Millbrae Elementary School District
Summary of Available District Capacity

School Facility	State <u>Capacity</u>	Space <u>Needed</u>	Available <u>Capacity</u>
Grades TK-6	1,850	1,815	35
Grades 7-8	729	568	161
Totals	2,579	2,383	196

The District capacity of 2,579 is more than the space needed of 2,383, assuming the existing facilities remain in sufficient condition to maintain existing levels of service. The difference is 196 students.

## **Calculation of Development's Fiscal Impact on Schools**

This section of the Study will demonstrate that a reasonable relationship exists between residential, commercial/industrial development and the need for school facilities in the Millbrae Elementary School District. To the extent this relationship exists, the District is justified in levying developer fees as authorized by Education Code Section 17620.

## School Facility Construction Costs

For the purposes of estimating the cost of building school facilities we have used the State School Building Program funding allowances. These amounts are shown in Table 9. In addition to the basic construction costs, there are site acquisition costs of \$1,000,000 per acre and service-site, utilities, off-site and general site development costs which are also shown in Table 9.

Table 9

#### **NEW CONSTRUCTION COSTS**

				Per Student	
<u>Grade</u>	Base Grant	Fire Alarms	Fire Sprinklers	<u>Total</u>	
TK-6	\$29,246	\$34	\$490	\$29,770	
7-8	\$30,932	\$46	\$584	\$31,562

	Acres			Site			

Note: The grant amounts used are twice those shown in the appendix to represent the full cost of the facility needs and not just the standard State funding share of 50%.

## Millbrae Elementary School District 2022 Developer Fee Justification Study April 2022

#### Reconstruction/Modernization Costs

In addition to any new facilities needed, there is also a need to reconstruct or modernize existing facilities in order to maintain the existing levels of service as students from new development continue to arrive in the District's facilities. In order to generate capacity, it may also be necessary to reopen closed school facilities. Such reopening often requires reconstruction in order to provide the District's existing level of service. For purposes of this report, the analysis of modernization/reconstruction includes the possible reopening and refurbishing of closed or unused school facilities.

California has made a significant investment in school facilities through grants provided to help extend the useful life of public schools. The State's largest funding source for public school modernization projects, the School Facilities Program (SFP), requires a minimum local funding contribution of 40% of SFP-eligible costs. The State may provide up to 60% of the eligible costs at those times that State funding is available. However, SFP modernization grants frequently, if not usually, fall short of providing 60% of the actual costs for major modernizations. In the best cases, developer fees can help meet the District's required 40% local share. In many cases, developer fees may be necessary to supplement both the State's and the school district's contribution to a project.

Buildings generate eligibility for State reconstruction/modernization funding once they reach an age of 25 years old for permanent buildings and 20 years old for portables.

The usable life of school facilities is an important consideration in determining district facility needs into the future. The specific time when the projected residential developments will be built cannot be precisely predicted. Some new homes may be immediately occupied by families with school aged children, while others may be immediately occupied who will have school-aged children in five to ten years. As a result of these variables, for each new home, the District must be prepared to house the students residing there for an extended period of time. Students generated by the next five years of development will need to be accommodated in District schools for a significant amount of time that could exceed twenty years. Thus, the District will need to ensure that it has facilities in place for future decades.

As evidenced by the State Building program's use of the criteria that buildings older than twenty-five years (and portables older than twenty years) are eligible for modernization funds, school buildings require reconstruction/modernization to remain in use for students beyond the initial twenty to twenty-five years of life of those buildings. To the extent that the

District has buildings older than twenty to twenty-five years old, the point will be reached without reconstruction/modernization that those buildings will no longer be able to provide the existing level of service to students, and may, in some circumstances, need to be closed entirely for health and safety reasons. However, because of the new development, reconstruction/modernization must occur in order to have available school housing for the new students from development.

The following table shows the District's eligibility for modernization/reconstruction funding in the State Building Program.

Table 10

Modernization Pro	ject Needs					
	Eligible N	/lodernizat	ion Grants	State	District	Project
<u>School</u>	<u>Elem</u>	<u>Middle</u>	Spec Ed	<u>Funding</u>	<u>Share</u>	<u>Total</u>
Taylor Middle	0	851	0	\$5,315,040	\$3,543,359	\$8,858,399

Table 11 **New Development Share of Modernization Costs** 

	Eligible Modernization		New Developm	nent
<u>Grade</u>	<u>Grants</u>	<b>Students</b>	\$/Student	<u>Amount</u>
TK-6	0	35	\$9,860	\$0
7-8	851	16	\$10,409	\$166,544
Totals	851	51		\$166,544

Includes students from new developments not housed in new facilities. Amounts based on State OPSC budgets for modernization projects.

This data is used to show that there are significant needs within the school District to invest in its existing facilities. Without modernizing its schools, the District could be forced to begin closing some of its buildings and schools.

To accurately account for the amount of the modernization projects attributed to the impact of new developments, only the students from new developments that were not already housed in new facilities are included in the net needs for modernization projects. As can be seen in the charts, the net modernization needs due to new development impacts are much less than the total District modernization needs.

### Impact of New Residential Development

This next table compares the development-related enrollment to the available district capacity for each grade level and then multiplies the unhoused students by the new school construction costs to determine the total school facility costs related to the impact of new residential housing developments.

In addition, the State provides that new construction projects can include the costs for site acquisition and development, including appraisals, surveys and title reports. The District needs to acquire 0.53 acres to meet the needs of the students projected from the new developments. Therefore, the costs for site acquisition and development of the land have been included in the total impacts due to new development.

Finally, the modernization needs are included for the students not housed in new facilities but who would be housed in existing facilities that are eligible for and need to be modernized to provide adequate housing and to maintain the existing level of service for the students generated by development.

Table 12

Millbrae Elementary School District
Summary of Residential Impact

School Facility	Development <u>Projection</u>	Available <u>Space</u>	Net <u>Unhoused</u>	Construction Cost Per Student	Total Facility <u>Costs</u>
Elementary	67	35	32	\$29,770	\$952,640
Middle	16	161	0	\$31,562	\$0
Site Purchase	e: 0.53 acres				\$530,000
Site Developn	nent:				\$249,156
			New Constr	uction Needs:	\$1,731,796
			Modernizati	ion Needs:	\$166,544
			TOTAL NEE	DS:	\$1,898,340
			Average co	st per student:	\$22,872
			Total Reside	ential Sq Ft:	553,575
			Residential	Fee Justified:	\$3.43

The total need for school facilities based solely on the impact of the 671 new housing units projected over the next five years totals \$1,898,340. To determine the impact per square foot of residential development, this amount is divided by the total square feet of the projected developments. The average size home to be built will average 825 square feet. The total area for 671 new homes would therefore be 553,575 square feet. The total residential fee needed to be able to collect \$1,898,340 would be \$3.43 per square foot.

#### Impact of Other Residential Development

In addition to new residential development projects that typically include new single family homes and new multi-family units, the District can also be impacted by additional types of new development projects. These include but are not limited to redevelopment projects, additions to existing housing units, and replacement of existing housing units with new housing units.

These development projects are still residential projects and therefore it is reasonable to assume they would have the same monetary impacts per square foot as the new residential development projects. However, the net impact is reduced due to the fact that there was a previous residential building in its place. Therefore, the development impact fees should only be charged for other residential developments if the new building(s) exceed the square footage area of the previous building(s). If the new building is larger than the existing building, then it is reasonable to assume that additional students could be generated by the project. The project would only pay for the development impact fees for the net increase in assessable space generated by the development project. Education Code allows for an exemption from development impacts fees for any additions to existing residential structures that are 500 square feet or less.

#### Impact of Commercial/Industrial Development

There is a correlation between the growth of commercial/industrial firms/facilities within a community and the generation of school students within most business service areas. Fees for commercial/industrial can only be imposed if the residential fees will not fully mitigate the cost of providing school facilities to students from new development.

The approach utilized in this section is to apply statutory standards, U.S. Census employment statistics, and local statistics to determine the impact of future commercial/industrial development projects on the District. Many of the factors used in this analysis were taken from the U.S.

Census, which remains the most complete and authoritative source of information on the community in addition to the "1990 SanDAG Traffic Generators Report".

#### Employees per Square Foot of Commercial Development

Results from a survey published by the San Diego Association of Governments "1990 San DAG Traffic Generators" are used to establish numbers of employees per square foot of building area to be anticipated in new commercial or industrial development projects. The average number of workers per 1,000 square feet of area ranges from 0.06 for Rental Self Storage to 4.79 for Standard Commercial Offices. The generation factors from that report are shown in the following table.

Table 13

Commercial/Industrial	Average Square Foot	Employees Per Average
Category	Per Employee	Square Foot
Banks	354	0.00283
Community Shopping Centers	652	0.00153
Neighborhood Shopping Centers	369	0.00271
Industrial Business Parks	284	0.00352
Industrial Parks	742	0.00135
Rental Self Storage	15541	0.0006

Lodging	882	0.00113
Standard Commercial Office	209	0.00479
Large High Rise Commercial Office	232	0.00431
Corporate Offices	372	0.00269
Medical Offices	234	0.00427

Source: 1990 SanDAG Traffic Generators report

#### Students per Employee

The number of students per employee is determined by using the 2015-2019 American Community Survey 5-Year Estimates for the District. There were 13,095 employees and 9,494 homes in the District. This represents a ratio of 1.3793 employees per home.

There were 2,349 school age children attending the District in 2019. This is a ratio of 0.1794 students per employee. This ratio, however, must be reduced by including only the percentage of employees that worked in their community of residence (18.7%), because only those employees living in the District will impact the District's school facilities with their children. The net ratio of students per employee in the District is 0.0335.

## Millbrae Elementary School District 2022 Developer Fee Justification Study April 2022

#### School Facilities Cost per Student

Facility costs for housing commercially generated students are the same as those used for residential construction. The cost factors used to assess the impact from commercial development projects are contained in Table 12.

#### Residential Offset

When additional employees are generated in the District as a result of new commercial/industrial development, fees will also be charged on the residential units necessary to provide housing for the employees living in the District. To prevent a commercial or industrial development from paying for the portion of the impact that will be covered by the residential fee, this amount has been calculated and deducted from each category. The residential offset amount is calculated by multiplying the following factors together and dividing by 1,000 (to convert from cost per 1,000 square feet to cost per square foot).

- Employees per 1,000 square feet (varies from a low of 0.06 for rental self storage to a high of 4.79 for office building).
- Percentage of employees that worked in their community of residence (18.7 percent).
- Housing units per employee (0.725). This was derived from the 2015-2019 American
  Community Survey 5-Year Estimates data for the District, which indicates there were
  13,095 employees, and the 2015-2019 American Community Survey 5-Year Estimates
  data for the District, which indicates there were 9,494 housing units.
- Percentage of employees that will occupy new housing units (75 percent).
- Average square feet per dwelling unit (825).
- Residential fee charged by the District (\$2.87 (60% of \$4.79) per square foot).
- Average cost per student was determined in Table 12.

The following table shows the calculation of the school facility costs generated by a square foot of new commercial/industrial development for each category of development.

Table 14

Millbrae Elementary School District
Summary of Commercial and Industrial Uses

	Employees per 1,000	Students per	Students per	Average Cost per	Cost per	Residential offset per	Net Cost per
<u>Type</u>	<u>Sq. Ft.</u>	<u>Employee</u>	1,000 Sq. Ft.	Student	<u>Sq. Ft.</u>	<u>Sq. Ft.</u>	<u>Sq. Ft.</u>

<sup>\*</sup>Based on 1990 SanDAG Traffic Generator Report

#### Net Cost per Square Foot

Since the Districts share of the State Maximum Fee is now \$0.47 (60% of \$0.78) for commercial/industrial construction, the District is justified in collecting the maximum fee for all categories with the exception of Rental Self Storage. The District can only justify collection of \$0.04 per square foot of Rental Self Storage construction.

#### Verifying the Sufficiency of the Development Impact

Education Code Section 17620 requires districts to find that fee revenues will not exceed the cost of providing school facilities to the students generated by the development paying the fees. This section shows that the fee revenues do not exceed the impact of the new development.

The total need for school facilities resulting from new development totals \$1,898,340. The amount the District would collect over the five year period at the maximum rate of \$2.87 (60% of \$4.79) for residential and \$0.47 (60% of \$0.78) for commercial/industrial development would be as follows:

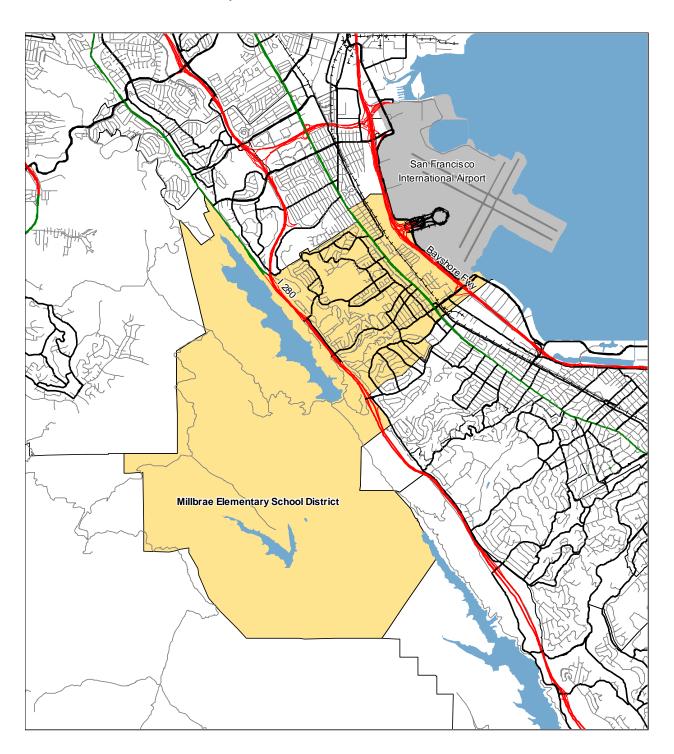

\$2.87 x 671 homes x 825 sq ft per home = \$1,588,760 for Residential \$0.47 x 75,792 sq ft per year x 5 years = \$178,111 for Commercial/Industrial Total projected 5 year income: \$1,766,871

The estimated income is less than the projected facility needs due to the impact of new development projects.

## **District Map**

The following map shows the extent of the areas for which development fees are applicable to the Millbrae Elementary School District.

## Millbrae Elementary School District 2022 Developer Fee Justification Study April 2022

#### Conclusion

Based on the data contained in this Study, it is found that a reasonable relationship exists between residential, commercial/industrial development and the need for school facilities in the Millbrae Elementary School District. The following three nexus tests required to show justification for levying fees have been met:

<u>Burden Nexus:</u> New residential development will generate an average of 0.125 TK-8 grade students per unit. Because the District does not have adequate facilities for all the students generated by new developments, the District will need to build additional facilities and/or modernize/reconstruct the existing facilities in order to maintain existing level of services in which the new students will be housed.

<u>Cost Nexus:</u> The cost to provide new and reconstructed facilities is an average of \$3.43 per square foot of residential development. Each square foot of residential development will generate \$2.87 (60% of \$4.79) in developer fees resulting in a shortfall of \$0.56 per square foot.

<u>Benefit Nexus:</u> The developer fees to be collected by the Millbrae Elementary School District will be used for the provision of additional and reconstructed or modernized school facilities. This will benefit the students to be generated by new development by providing them with adequate educational school facilities.

The District's planned use of the fees received from development impacts will include the following types of projects, each of which will benefit students from new developments.

- New Schools: When there is enough development activity occurring in a single area, the District will build a new school to house the students from new developments.
- 2) Additions to Existing Schools: When infill development occurs, the District will accommodate students at existing schools by building needed classrooms and/or support facilities such as cafeterias, restrooms, gyms and libraries as needed to increase the school capacity. Schools may also need upgrades of the technology and tele-communication systems to be able to increase their capacity.

- 3) Portable Replacement Projects: Some of the District's capacity is in temporary portables and therefore may not be included in the State's capacity calculations. These portables can be replaced with new permanent or modular classrooms to provide adequate space for students from new developments. These projects result in an increase to the facility capacity according to State standards. In addition, old portables that have reached the end of their life expectancy, will need to be replaced to maintain the existing level of service. These types of projects are considered modernization projects in the State Building Program. If development impacts did not exist, the old portables could be removed.
- 4) Modernization/Upgrade Projects: In many cases, students from new developments are not located in areas where new schools are planned to be built. The District plans to modernize or upgrade older schools to be equivalent to new schools so students will be housed in equitable facilities to those students housed in new schools. These projects may include updates to the building structures to meet current building standards, along with upgrades to the current fire and safety standards and any access compliance standards.

The Districts 2018 Facilities Master Plan identified \$89,885,702 in facility needs (Page 5). Projects include modernization at all the schools and the reconstruction of Lomita Park Elementary School (Page 6).

Per the District's agreement with the High School District, the elementary share of the developer fees collected is 60%. The reasonable relationship identified by these findings provides the required justification for the Millbrae Elementary School District to levy the maximum fees of \$2.87 (60% of \$4.79) per square foot for residential construction and \$0.47 (60% of \$0.78) per square foot for commercial/industrial construction, except for Rental Self Storage facilities in which a fee of \$0.04 per square foot is justified as authorized by Education Code Section 17620.

EXECUTIVE SUMMARY SECTION 1

## **FACILITY NEEDS BY TYPE**

The Facilities Master Plan (FMP) has identified a total of \$89,885,702 in facility needs. The existing needs identified in the FMP have been gathered by visiting each school site, assessing the conditions and working with school site staff and District administration.

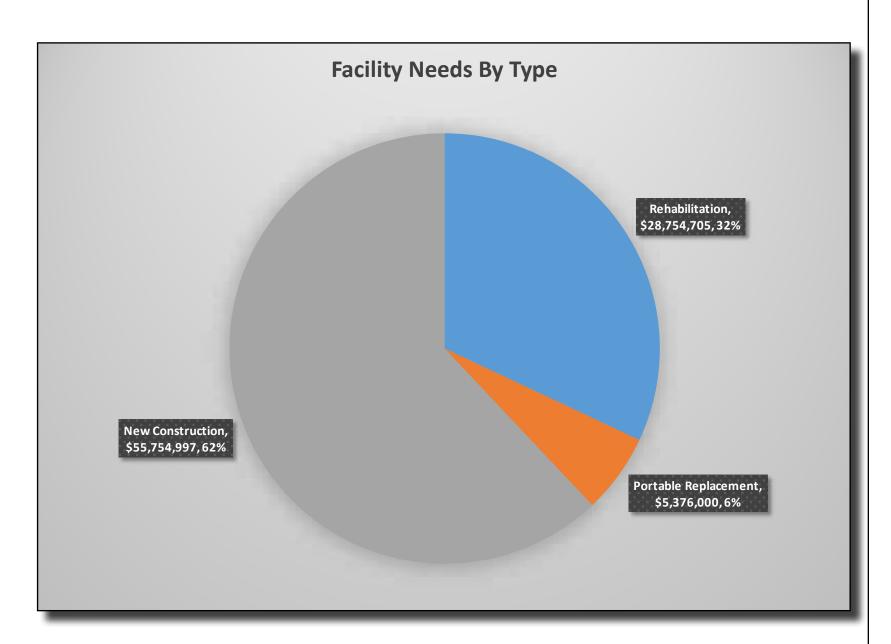

<u>Amount</u>	<u>Source</u>
\$28,754,705	Rehabilitation
\$5,376,000	Portable Replacemen
<u>\$55,754,997</u>	New Construction

\$89,885,702 Total Facility Needs

**Rehabilitation** represents general improvements for the existing buildings that result in extending the useful life by an additional 25 years. This includes replacing and upgrading systems, as needed. Modernization funding from the State Building Program can be used to fund both Rehabilitation categories identified in this report.

**Portable Replacement** refers to the removal of existing portable buildings on site and replacing them with permanent buildings, whether of site-built, modular, panelized or other construction type.

**New Construction** includes the addition of new buildings such as classroom wings, multi-purpose event centers or gymnasiums. It may also include costs for support facilities such as sports fields, parking or other site-related infrastructure.

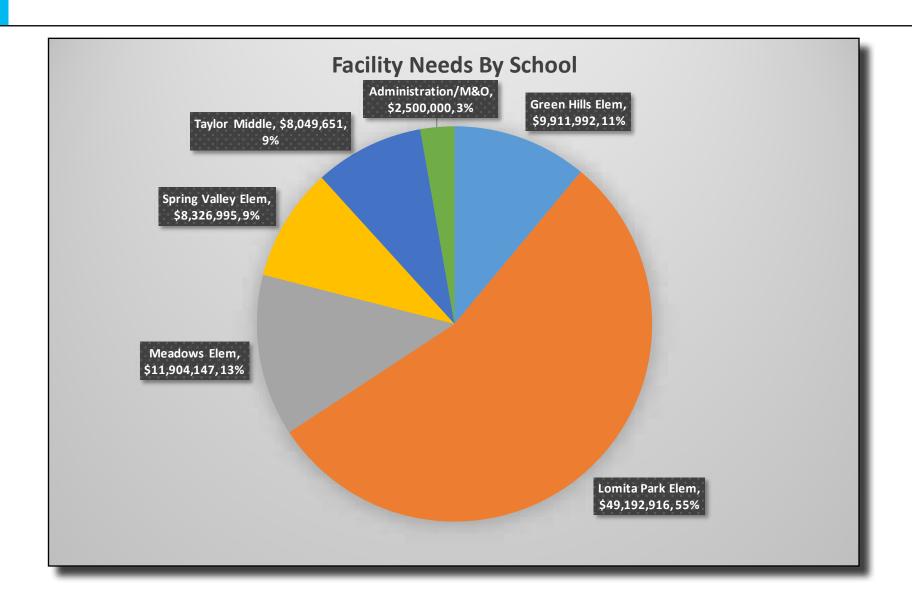

Proposed cost estimates and support budget costs are based upon the current 2018 costs for constructing public works in the region. Actual costs in the implementation plan are adjusted for inflation and construction cost escalation.

EXECUTIVE SUMMARY SECTION 1

## **FACILITY NEEDS BY SCHOOL SITE**

The Facilities Master Plan has identified a total of **\$89,885,702** in District-wide facility needs over the next six to ten years, including rehabilitation of existing permanent buildings; replacement of aging portable classrooms with permanent buildings; and additional new facilities construction at selected sites.

Proposed cost estimates and support budget costs are based upon the current 2018 costs for constructing public works in the region. Actual costs in the implementation plan are adjusted for inflation and construction cost escalation.

Built 1970 to 1979	1,150	±178	
Built 1960 to 1969	2,203	±265	

Built 1950 to 1959 ±206

## **Table Notes**

## SELECTED HOUSING CHARACTERISTICS

Survey/Program: American Community Survey

**Year:** 2019

Estimates: 5-Year Table ID: DP04

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units for states and counties.

Source: U.S. Census Bureau, 2015-2019 American Community Survey 5-Year Estimates

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.

Households not paying cash rent are excluded from the calculation of median gross rent.

Telephone service data are not available for certain geographic areas due to problems with data collection of this question that occurred in 2015, 2016, and 2019. Both ACS 1-year and ACS 5-year files were affected. It may take several years in the ACS 5-year files until the estimates are available for the geographic areas affected.

The 2015-2019 American Community Survey (ACS) data generally reflect the September 2018 Office of Management and Budget (OMB) delineations of metropolitan and micropolitan statistical areas. In certain instances, the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB delineation lists due to differences in the effective dates of the geographic entities.

Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

#### Explanation of Symbols:

An "\*\*" entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.

An "-" entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution, or the margin of error associated with a median was larger than the median itself.

An "-" following a median estimate means the median falls in the lowest interval of an open-ended distribution. An "+" following a median estimate means the median falls in the upper interval of an open-ended distribution. An "\*\*\*" entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.

An "\*\*\*\*\*" entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.

An "N" entry in the estimate and margin of error columns indicates that data for this geographic area cannot be

displayed because the number of sample cases is too small.

An "(X)" means that the estimate is not applicable or not available.

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Technical Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

## MEANS OF TRANSPORTATION TO WORK BY SELECTED CHARACTERISTICS

Survey/Program: American Community Survey

**Year:** 2019

Estimates: 5-Year Table ID: S0802

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units for states and counties.

Source: U.S. Census Bureau, 2015-2019 American Community Survey 5-Year Estimates

When information is missing or inconsistent, the Census Bureau logically assigns an acceptable value using the response to a related question or questions. If a logical assignment is not possible, data are filled using a statistical process called allocation, which uses a similar individual or household to provide a donor value. The "Allocated" section is the number of respondents who received an allocated value for a particular subject.

2019 ACS data products include updates to several categories of the existing means of transportation question. For more information, see: Change to Means of Transportation.

Occupation titles and their 4-digit codes are based on the Standard Occupational Classification (SOC). The Census occupation codes for 2018 and later years are based on the 2018 revision of the SOC. To allow for the creation of the multiyear tables, occupation data in the multiyear files (prior to data year 2018) were recoded to the 2018 Census occupation codes. We recommend using caution when comparing data coded using 2018 Census occupation codes with data coded using Census occupation codes prior to data year 2018. For more information on the Census occupation code changes, please visit our website at https://www.census.gov/topics/employment /industry-occupation/guidance/code-lists.html.

In 2019, methodological changes were made to the class of worker question. These changes involved modifications to the question wording, the category wording, and the visual format of the categories on the questionnaire. The format for the class of worker categories are now listed under the headings "Private Sector Employee," "Government Employee," and "Self-Employed or Other." Additionally, the category of Active Duty was added as one of the response categories under the "Government Employee" section for the mail questionnaire. For more detailed information about the 2019 changes, see the 2016 American Community Survey Content Test Report for Class of Worker located at http://www.census.gov/library/working-papers/2017/acs/2017\_Martinez\_01.html.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.

4/18/22, 9:58 AM Census - Table Results

Foreign born excludes people born outside the United States to a parent who is a U.S. citizen.

Workers include members of the Armed Forces and civilians who were at work last week.

Industry titles and their 4-digit codes are based on the North American Industry Classification System (NAICS). The Census industry codes for 2018 and later years are based on the 2017 revision of the NAICS. To allow for the creation of multiyear tables, industry data in the multiyear files (prior to data year 2018) were recoded to the 2017 Census industry codes. We recommend using caution when comparing data coded using 2017 Census industry codes with data coded using Census industry codes prior to data year 2018. For more information on the Census industry code changes, please visit our website at https://www.census.gov/topics/employment/industry-occupation/guidance/code-lists.html.

The 2015-2019 American Community Survey (ACS) data generally reflect the September 2018 Office of Management and Budget (OMB) delineations of metropolitan and micropolitan statistical areas. In certain instances, the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB delineation lists due to differences in the effective dates of the geographic entities.

Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

## **Use of Developer Fees:**

A School District can use the revenue collected on residential and commercial/industrial construction for the purposes listed below:

- Purchase or lease of interim school facilities to house students generated by new development pending the construction of permanent facilities.
- Purchase or lease of land for school facilities for such students.
- Acquisition of school facilities for such students, including:
  - o Construction
  - o Modernization/reconstruction
  - o Architectural and engineering costs
  - o Permits and plan checking
  - o Testing and inspection
  - o Furniture, Equipment and Technology for use in school facilities
- Legal and other administrative costs related to the provision of such new facilities
- Administration of the collection of, and justification for, such fees, and
- Any other purpose arising from the process of providing facilities for students generated by new development.

Following is an excerpt from the Education Code that states the valid uses of the Level 1 developer fees. It refers to construction and reconstruction. The term reconstruction was originally used in the Leroy Greene program. The term modernization is currently used in the 1998 State Building Program and represents the same scope of work used in the original reconstruction projects.

Ed Code Section 17620. (a) (1) The governing board of any school district is authorized to levy a fee, charge, dedication, or other requirement against any construction within the boundaries of the district, for the purpose of funding the construction or reconstruction of school facilities, subject to any limitations set forth in Chapter 4.9 (commencing with Section 65995) of Division 1 of Title 7 of the Government Code. This fee, charge, dedication, or other requirement may be applied to construction only as follows: ...

The limitations referred to in this text describe the maximum amounts that can be charged for residential and commercial/industrial projects and any projects that qualify for exemptions. They do not limit the use of the funds received.

## REPORT OF THE EXECUTIVE OFFICER State Allocation Board Meeting, February 23, 2022

## INDEX ADJUSTMENT ON THE ASSESSMENT FOR DEVELOPMENT

## **PURPOSE OF REPORT**

To report the index adjustment on the assessment for development, which may be levied pursuant to Education Code Section 17620.

### **DESCRIPTION**

The law requires the maximum assessment for development be adjusted every two years by the change in the Class B construction cost index, as determined by the State Allocation Board (Board) in each calendar year. This item requests that the Board make the adjustment based on the change reflected using the RS Means index.

#### **AUTHORITY**

Education Code Section 17620(a)(1) states the following: "The governing board of any school district is authorized to levy a fee, charge, dedication, or other requirement against any construction within the boundaries of the district, for the purpose of funding the construction or reconstruction of school facilities, subject to any limitations set forth in Chapter 4.9 (commencing with Section 65995) of Division 1 of Title 7 of the Government Code."

Government Code Section 65995(b)(3) states the following: "The amount of the limits set forth in paragraphs (1) and (2) shall be increased in 2000, and every two years thereafter, according to the adjustment for inflation set forth in the statewide cost index for class B construction, as determined by the State Allocation Board at its January meeting, which increase shall be effective as of the date of that meeting."

#### BACKGROUND

There are three levels that may be levied for developer's fees. The fees are levied on a per-square foot basis. The lowest fee, Level I, is assessed if the district conducts a Justification Study that establishes the connection between the development coming into the district and the assessment of fees to pay for the cost of the facilities needed to house future students. The Level II fee is assessed if a district makes a timely application to the Board for new construction funding, conducts a School Facility Needs Analysis pursuant to Government Code Section 65995.6, and satisfies at least two of the requirements listed in Government Code Section 65995.5(b)(3). The Level III fee is assessed when State bond funds are exhausted; the district may impose a developer's fee up to 100 percent of the School Facility Program new construction project cost.

#### STAFF ANALYSIS/STATEMENTS

A historical comparison of the assessment rates for development fees for 2018 and 2020 are shown below for information. According to the RS Means, the cost index for Class B construction increased by 17.45% percent, during the two-year period from January 2020 to January 2022, requiring the assessment for development fees to be adjusted as follows beginning January 2022:

## RS Means Index Maximum Level I Assessment Per Square Foot

	<u>2018</u>	<u>2020</u>	<u>2022</u>
Residential	\$3.79	\$4.08	\$4.79
Commercial/Industrial	\$0.61	\$0.66	\$0.78

## **RECOMMENDATION**

Increase the 2022 maximum Level I assessment for development in the amount of 17.45 percent using the RS Means Index to be effective immediately.

## REPORT OF THE EXECUTIVE OFFICER State Allocation Board Meeting, February 23, 2022

# ANNUAL ADJUSTMENT TO SCHOOL FACILITY PROGRAM GRANTS

## **PURPOSE OF REPORT**

To adopt the annual adjustment in the School Facility Program (SFP) grants based on the change in construction costs pursuant to the Education Code (EC) and SFP Regulations.

## **DESCRIPTION**

This item presents the State Allocation Board (Board) with the annual adjustment to the SFP grants based on the statewide cost index for Class B construction. Each year the Board adjusts the SFP grants to reflect construction cost changes. In January 2016, the Board adopted the RS Means index for 2016 and future years. This item presents the 2022 annual adjustment to SFP grants based on the RS Means index.

## <u>AUTHORITY</u>

See Attachment A.

## STAFF ANALYSIS/STATEMENTS

At the January 2016 meeting, the Board adopted an increase to the SFP grants using the RS Means Construction Cost Index (CCI) as the statewide cost index for Class B construction.

The current rate of change between 2021 and 2022 for the RS Means Class B CCI is 15.80 percent. The chart below reflects the amounts previously adopted for 2021 compared to the potential amount for the new construction base grants.

**RS Means 15.80%** 

Grade Level	Regulation Section	Current Adjusted Grant Per Pupil Effective 1-1-21	Potential Grant Per Pupil Effective 1-1-22
Elementary	1859.71	\$12,628	\$14,623
Middle	1859.71	\$13,356	\$15,466
High	1859.71	\$16,994	\$19,679
Special Day Class  – Severe	1859.71.1	\$35,484	\$41,090
Special Day Class  - Non-Severe	1859.71.1	\$23,731	\$27,480

## **STAFF ANALYSIS/STATEMENTS** (cont.)

The following chart shows the amounts previously adopted compared to the potential amount for the modernization base grants.

**RS Means 15.80%** 

Grade Level	Regulation Section	Current Adjusted Grant Per Pupil Effective 1-1-21	Potential Grant Per Pupil Effective 1-1-22
Elementary	1859.78	\$4,808	\$5,568
Middle	1859.78	\$5,085	\$5,888
High	1859.78	\$6,658	\$7,710
Special Day Class  – Severe	1859.78.3	\$15,325	\$17,746
Special Day Class  – Non-Severe	1859.78.3	\$10,253	\$11,873

In addition, the CCI adjustment would increase the threshold amount for Government Code Section 66452.6(a)(2) for the period of one year commencing March 1, 2022. The following chart shows the amount previously adopted for 2021 compared to the resulting threshold amount, upon approval of the proposed 2022 CCI adjustment:

**RS Means 15.80%** 

	Effective 3-1-2021	Potential 3-1-2022
Resulting Amount	\$317,941	\$368,176

## **RECOMMENDATION**

Adopt the increase of 15.80 percent for the 2022 SFP grants based on the RS Means Construction Cost Index as shown in Attachment B.

### **AUTHORITY**

For the New Construction grant, EC Section 17072.10(b) states, "The board annually shall adjust the per-unhoused- pupil apportionment to reflect construction cost changes, as set forth in the statewide cost index for class B construction as determined by the board."

For Modernization funding, EC Section 17074.10(b) states, "The board shall annually adjust the factors set forth in subdivision (a) according to the adjustment for inflation set forth in the statewide cost index for class B construction, as determined by the board."

## Government Code Section 66452.6 states:

(a)(1) An approved or conditionally approved tentative map shall expire 24 months after its approval or conditional approval, or after any additional period of time as may be prescribed by local ordinance, not to exceed an additional 12 months. However, if the subdivider is required to expend two hundred thirty-six thousand seven hundred ninety dollars (\$236,790) or more to construct, improve, or finance the construction or improvement of public improvements outside the property boundaries of the tentative map, excluding improvements of public rights-of-way which abut the boundary of the property to be subdivided and which are reasonably related to the development of that property, each filing of a final map authorized by Section 66456.1 shall extend the expiration of the approved or conditionally approved tentative map by 36 months from the date of its expiration, as provided in this section, or the date of the previously filed final map, whichever is later. The extensions shall not extend the tentative map more than 10 years from its approval or conditional approval.

. . .

(2) Commencing January 1, 2012, and each calendar year thereafter, the amount of two hundred thirty-six thousand seven hundred ninety dollars (\$236,790) shall be annually increased by operation of law according to the adjustment for inflation set forth in the statewide cost index for class B construction, as determined by the State Allocation Board at its January meeting. The effective date of each annual adjustment shall be March 1. The adjusted amount shall apply to tentative and vesting tentative maps whose applications were received after the effective date of the adjustment.

## SFP Regulation Section 1859.71 states,

The new construction per-unhoused-pupil grant amount, as provided by Education Code Section 17072.10(a), will be adjusted annually based on the change in the Class B Construction Cost Index as approved by the Board each January. The base Class B Construction Cost Index shall be 1.30 and the first adjustment shall be January, 1999.

The new construction per-unhoused-pupil grant amount, as provided by Education Code Section 17072.10(a), may be increased by an additional amount not to exceed six percent in a fiscal year, or decreased, based on the analysis of the current cost to build schools as reported on the Project Information Worksheet (Revised 05/10) which shall be submitted with the Forms SAB 50-05 and 50-06 and as approved by the Board.

SFP Regulation Section 1859.2 Definitions states,

"Class B Construction Cost Index" is a construction factor index for structures made of reinforced concrete or steel frames, concrete floors, and roofs, and accepted and used by the Board.

SFP Regulation Section 1859.78 states, "The modernization per-unhoused-pupil grant amount, as provided by Education Code Section 17074.10(a), will be adjusted annually based on the change in the Class B Construction Cost Index as approved by the Board each January.
